

RSP Safety MasterClass - Manual Handling Risk Assessment

Health and Safety Courses for Staff/Managers/Business Owners

Who should attend

These Masterclasses are for those of you who have been doing risk assessments for a while and so have some experience and general understanding of the principles but you would like some reassurance that what you are doing is right.

This course is suitable for those responsible for assessments in most industries including construction.

Why you should attend

Maybe you just feel that you have created too much paper work; maybe you are having trouble completing the assessments or understanding when they are finished. How can you utilise generic assessments more?

What you will learn

- A re-examination of the basic legal requirements of 'risk assessment'
- What is a 'safe system of work' exactly?
- What is missing from the traditional process?
- The HSE versus the insurers view on risk assessment
- Consider alternative approaches to assessments and learn how to make all assessments objective instead of subjective
- A look at examples carried out by experienced safety practitioners
